ABSTRACT OF THE DISCLOSURE

- 1 In a gateway, a packet received from a first network
- 2 contains first address data conforming to the first network in
- 3 the packet header and second address data conforming to a
- 4 second network in an auxiliary header. The first address data of
- 5 the packet is then rewritten with the second address data of the
- 6 packet and transmitted from the gateway to the second
- 7 network.
